Getting the skinny on your Photoshop workspace When you create a new document in Photoshop, you see the workspace shown in Figure 5-5. The workspace is divided into three areas: the canvas, toolbox, and layers panel. The canvas is the work area on which you create and edit your images. The toolbox is where you find the tools you use to create and edit your images; it's also where you store the panels that help you work with your images. The layers panel shows the objects currently displayed on the canvas and provides access to the Photoshop layers used to create and edit your image. If you've never used Photoshop before, don't be scared. The next few sections provide some initial training on how to create and edit your images with Photoshop. Also be aware that later in this chapter, I explain how to use these same basic techniques with other editing programs such as Elements and Picasa. **Figure 5-5:** The creative canvas at the heart of Photoshop. | --- | ---

Role of negative pressure wound therapy with delayed changes of wound dressings on healing of split-thickness skin graft donor sites. The aim of this study was to evaluate the effect of negative pressure wound therapy (NPWT) on healing of split-thickness skin graft donor sites. A total of 240 consecutive patients undergoing surgery for massive burns over the dorsum were assigned randomly to one of four treatment groups: graft alone, graft with NPWT for 14 days, graft with NPWT for 14 days and NPWT for 7 days, and graft with NPWT for 14 days and NPWT for 7 days. The split-thickness skin graft was performed on the dorsal surface of each patient in the two groups, with or without NPWT, to the remaining third part of the skin after the graft was taken. The area was covered with gauze and adhesive tape for the first day, and the second and third groups were treated with NPWT. The primary end point was to evaluate wound healing, and the secondary end point was to compare the need for wound-related dressing changes. Healing rates of the two different treatment groups did not differ significantly (A: 83.7%, B: 82.3%, P=0.56). The clinical results of primary healing were similar with these four groups (P=0.93). The wounds treated with NPWT did not have fewer dressing changes than those without NPWT (P=0.21). This study showed that treatment with NPWT for the donor sites of split-thickness skin graft patients did not improve the healing of donor sites. NPWT should not be recommended for graft donor sites.The present invention relates generally to a system for controlling the door of a metal casting foundry using a flexible extruded polymeric cord and more particularly to a breakaway mounting and adjustment system for said cord. Manually operated door systems for foundry tundishes are well known in the art. These doors are mounted on the tundish lip by means of a bracket and operate by a cable or band passing through a hole in the center of the bracket. In the past these cables have been intended to be removed easily, so that the doors can be opened and closed manually. Normally the cable has a nominal diameter of 2 mm or slightly more. This small diameter cable is not capable of withstanding significant load. The cables are often threaded through holes and brackets and wrapped around a drum, all of which are not only difficult, but laborious to do, and subject

In experiments on conscious intact rats the authors observed changes of activity of phosphokinases of the myocardial beta-adrenoceptors, of the myosin light chain kinase and myosin heavy chain (MHC) in the left ventricular myocardium after constriction of the abdominal aorta. The functional deficiency was found to have caused changes in the distribution of the activity of the adenylate cyclase, of the MHC phosphorylase and myosin light chain phosphatase in the myocardium. It is concluded that the biochemical changes in various regions of the myocardium are connected with discrete functional disturbances of the cardiomyocytes.Q: ArrayIndexOutOfBoundsException in Android When I run my code I get java.lang.ArrayIndexOutOfBoundsException: 1 java.lang.ArrayIndexOutOfBoundsException: 1 at android.content.res.TypedArray.getString(TypedArray.java:233)
